

16 October 2017

Rod Marshall

As secretary of the Oakmont Strata Complex in Kellyville, I can confirm the lighting that Easily Green Energy Solutions recently installed have significantly reduced our energy consumption.

We took time of use readings for five days prior to installation and five days after installation to monitor this. We can clearly see exactly when the lights were installed as the average drop in consumption overall is 65%. This equates to savings of about \$9 000 a year at the current rates so this will pay for itself in less than a year.

Thank you for a professional hassel free installation with real measurable savings.

Regards

Gordon Brown
